

Fertigation Control Solutions Hardware & Software

ONFIELD brings precision fertigation control to center pivot irrigation – simple to install, simple to run, and built for the way you already farm.

Two Ways To Get OnField Ferigation

New Installation

Complete Turn-Key Solution

A complete, simple solution to your fertigation control requirements – built from the ground up around the ITC Dostec AC Piston Dosing Pump.

- Options for constant and variable flow rate
- Suitable for all electrical pivot types*
- Fixed or portable pump configurations

Retrofit

Upgrade What You Already Own

A complete solution that uses your existing equipment to gain remote control through a simple upgrade, no new fertigation pump required.

- Remote rate changes from anywhere
- Variable flow rate, including corner arms & end guns
- Suitable for all electrical pivot types*

Low Capital Cost

Affordable entry into precision fertigation control

Low Ongoing Cost

Simple, efficient systems built to run season after season

Fast ROI

Start seeing returns from your first season on field

Ask about incentives:

Your local NRD may have an incentive program available for this hardware and software solution.

Works Together

Integrates automatically with SentinelAg

Both the New Installation and Retrofit options connect seamlessly with the SentinelAg real-time Nitrogen solution.
